## SNAP-ON SMILE:

Patented Snap-On Smile is a multi-purpose, non-invasive, cosmetic, removable appliance that literally snaps over the patient's existing teeth, without impinging on the gingival tissue or covering the palate. It's completely tooth-borne, so no adhesives are required. Patients can eat, drink, and function normally, and wear it all day, every day.

Snap-On Smile offers an affordable approach to restorative and cosmetic dentistry. Patients looking for a non-invasive, reversible option are excellent candidates for Snap-On Smile.

## YOU WILL LEARN:

The functional uses of Snap-On Smile and Snap It! as removable, restorative appliances for implant temporaries, partials, provisionals, stay plates, double cantilevers, raising vertical dimension, and replacing missing or broken teeth.

## RSVP:

Seating is limited. \$25 to reserve your space.

To reserve your space, please contact Deborah Curson-Vieira.
